

# Say Goodbye to Clogs

Is precipitation build-up at the point of chemical injection getting in the way of consistent metering and trouble free operation?

Then the Chemlance corporation stop, by Metcon, is the solution for you!

The Chemlance is designed with an easy to use integral cleaning mechanism that will allow an operator to breakthrough and clean away precipitate build-up without any interruption to the system.

## Chemlance Advantages

- Reduces downtime compared to standard corporation stops
- Allows for injection into the centre of the main pipe for increased chemical dispersion (up to 12" diameter)
- PVC construction and Viton gasket seals for superior chemical resistance

## Easy Operation

STEP 1

Manually rotate the cleaning device counter clockwise to extend the cleaning lance and clean away the precipitate build-up

STEP 2

Manually rotate the cleaning device clockwise to retract the cleaning lance to regular operating position

Repeat the cleaning procedure at least once a week or more often if required.
